

Splashbacks & Wall Panels in High Gloss, Satin Finish, DigitalArt Printed, any colour & Filler EFX™

ISPS are contactable 7 days a week 9am till 9pm Mon to Fri & 11am till 9pm Sat & Sun servicing nationally.

Bonethane®, available in any colour & EFX. A Polymer based product & coating formula, crafted & customised modelling strength, flexibility & colour spectrums that are simply endless. **Bonethane® Premium** has a continuous service temperature of 120°C. Suitable for induction cook tops, maintain distance specifications, showers cubicles, wet areas, feature walls, hospitals, under bars, outdoors, does not split or crack when following cutting instructions, a breeze to work with.

IPA Acrylic Splashbacks has a continuous service temperature of 72°C. Light flexible, bringing style to any home or commercial environment. IPA Acrylic grade is used for feature walls & shower cubicles, underbars not suitable for any cook-top, use Vetropoly Toughened glass.

See our filler EFX™ endless designs mixing colour combinations, used as either a mosaic filler design creating length extension, bordering or as a feature wall. Custom designed with your specific mix of colour blend, coordinating colours in high gloss or satin finish. Our Premium Metallic Satin finish range is durable & great for table tops, perfect for kitchen tables & bench spaces. Be in control, choose your colour, choose BonethanePremium or IPA Acrylic all custom Australian made.

FEATURE & BENIFITS Bonethane® & IPA Acrylic™

- ▶ Bonethane® is DIY & cost effective. Premium Sheets do not split or crack when cutting or drilling.
- ▶ Bonethane® grades can be cut down with ease on site including power points & innovative angles.
- ▶ Bonethane® & IPA Acrylic is available in any colour, metallic & abstract EFX™. Can be colour matched up to 12% variation to your selected colour choice.
- ▶ Bonethane® is suitable for indoors, outdoors & most wet areas. Applied virtually anywhere you can imagine. Great for shower cubicles!
- ▶ Bonethane® grades installation is easy, fast with a visual reward in a matter of hours.
- ▶ IPA Acrylic™ grade require more attention when cutting & should not be confused with Bonethane Premium, both substrates cut, repair & handle heat differently. IPA has a hard wearing surface great for kicks, feature walls, showers, heavy trafficked areas.

- ▶ Easy to clean, warm soapy water & sponge, rinse residue. Bonethane® grades air dry & shine, no polishing necessary saving you cleaning time. Harsh cleaning agents, gone!
- ▶ Bonethane® grades can be placed over existing surfaces.
- ▶ Bonethane® grades come with GripTek backing, no need to coat walls a neutral colour or sanding of the backs of sheets.
- ▶ Bonethane Premium has better heat distribution than Acrylic grades of material. Burn test on You Tube Bonethane Premium Vs Acrylic Candle burn test a must see!
- ▶ Bonethane & IPA are a custom made to order DIY product. Order what you need in any colour, accessories also available. We can create your corporate colour & logos into our sheeting.
- ▶ On Bonethane Premium ISPS can double your Warranty, ask how.
- ▶ IPA Acrylic is great for commercial fit outs.

See our Bonethane installation on Youtube. We intentionally scratch Bonethane with industrial scissors and repair before your eyes in real time. *Bonethane Splashbacks*, everything else is just plastic™
Bonethane Splashbacks, the right choice™

Step by Step Installation Guide

Step 1

Lay Bonethane® flat for first 3 hours prior to Installation. Ensure wall is level flush free from holes neutral in colour forming even flat surface for Bonethane™ placement. Use only led pencil for marking cut outs or cuts on back of sheet, coated side.

Step 2

Measure the outside perimeter of the wall. Length and height, allowing 1 to 2mm gap all around. For example if you: measure 500 height by 500 length your cut out area should be 498 x 498 (2mm). It is important that the 1 to 2mm gap is followed, allowing Bonethane™ to expand and contract. Also measure section for cut out.

Turn off Electricity from main switch!!!

Step 3:

On perimeter of Bonethane® allow a 1 to 2mm gap all around. The tile wedge will be placed around the perimeter of the mm gap once clear silicone is applied to back & placed upright, against wall. The tile wedge will hold Bonethane™ in place (more about this in STEP 8)

Step 4

It is important to place Bonethane® face down (masked side down) in preparation for cutting. The area for the preparation of cutting must be free of obstacles, on a solid flat, non slip surface, in a well ventilated, lit area. Ensure the Bonethane® sheet is firmly secure in preparation for cutting.

Step 5

Power hole cut outs vary on the power switch. The cut out should not be greater than the covering plate. An electrician will also need to connect electricity if you have extra outlets.

Step 6

Cut splash back once perimeter and cut out(s) measurements are final, making sure, Bonethane™ is face down, (that is the masked side is touching the flat level non slip surface and the coated side is facing you.

Step 7

After clear silicone grid process, mount Bonethane® onto wall, inserting cables through power hole cut outs, securing tile wedges around the 1 & 2mm allocated perimeter, leave tile wedges for approximately 2 hours. Clean surrounding areas free from saw dust particles. Once secure, peel off protective film from Bonethane® face. Please refer to "Care Do's" for keeping Bonethane® bright & beautiful

TIPS: Incorporate tiles as a design

DO NOT BUTT UP AGAINST GAS COOK TOPS

Step 8

Switch off Electricity for your safety!!! Add clear silicone to the coated side of Bonethane® (this is the side that does not have protective film), first vertically from the top then horizontally creating a grid of squares around 10 to 15 cm width and length ways.

Step 9

Finally use silicone clear non acidic to seal 2mm exposed joints & seal. Clear is always the safest choice, white is effective if you have a steady hand or you may seek the services of a professional. Follow instructions for silicone application, the product you choose should display instructions, make sure it is a water proof silicone used for kitchen and bathroom areas. When Bonethane® is upright & in a secure position peel off masking.

ISPS Innovations can provide a fire rated insert, custom made for behind your gas cook top. Made from Vetro Poly Star fire Toughened Glass in either metallic Silver or colour toned to blend with Bonethane® Premium or IPA Acrylic™. Please enquire about our glass offer call 08 8381 8880.

ISPS also customise trim in 6mm Anodised or Colour coded to finish your joints & Filler EFX.

CUSTOM ORDER TO SPECIFICATION in Bonethane or IPA Acrylic.

For custom colour selection simply follow these steps:

1. Place your order with an ISPS team member, you may pay via credit card or EFT, you may wish to discuss cut to size options of which you must supply signed cutting list.
2. Choose grade of material.
3. Choose any colour sample either from our standard colour range, paint colour chips or another colour you may have ie (fabric), anything really. Additional charges can apply on colour matching, processes.
4. Post your colour chip to ISPS Innovations, Colour DEPT, PO Box 339 Lonsdale SA 5160. You will need to supply the colour chip for colour matching with all your details including your invoice or purchase order number supplied by ISPS.
5. Your custom coloured Bonethane, IPA products will be supplied in 10 to 12 work days.

Colour Toning Existing High Gloss Bonethane or IPA Grades

If you are extending, & require more Bonethane or IPA, ISPS Innovations can colour tone additional pieces for your project. What we require is a piece of Bonethane or IPA at least A4 to A3 size to be posted back to us, so we can process colour. We can have up to a 12% variation in colour toning gloss colours. If the gloss sample is too small we are limited in our colour process which can blow variation out to 25% & can effect pigment ratio. When colour matching satin colours we are dealing with one range of colour, when colour matching high gloss we need to factor in light contrast along with gloss depth. A small sample in gloss limits full colour range & variation up to 25% can occur. So the bigger the gloss sample the better the match.

TIPS & COLOURS: 1 to 6

- 1) When ordering multiple colours, it is best to order of same colour batch. Ordering off different batches can result in variations.
- 2) A/White on white can appear grey, so choose your white carefully, this may be a special order.
- 3) Bonethane Grades come with Griptek™ backing, no need to coat walls a neutral colour or sanding of the backs of sheets.
- 4) Adhesive, clear neutral cure silicone apply in grid format 10cm apart to sheet or wall.
- 5) Use standard jig saw with fine sharp teeth for cutting.
- 6) Use plastic cutting blade for IPA acrylic grades & plan cuts. Please call ISPS for tips & helpful information
- 7) Bonethane Premium is DIY friendly & will not split or crack when cutting & drilling with a jigsaw with fine sharp teeth.
- 8) When ordering from different colour batch through ISPS, please ensure an A3 or A4 gloss sample is provided.

Please refer to our colour section on our website for more information on colour process www.ispsinnovations.com.au

Note M2 rate applies to straight cut only. Additional charges apply for angles, elevated & power hole cut outs.

Bonethane Premium Vs Acrylic candle burn test

BonethanePremium® the right choice

A candle burn test is conducted in a controlled environment. Bonethane Premium is the green arrow. Within a minute the acrylic substrates indicated in red accelerate with fury, with the flames rising. Bonethane Premium® stands the test, while Acrylic falls to lava.

Let ISPS Innovations assist you with all your custom interior & exterior needs. No minimum order quantity.

Stay tuned, more updates to follow.
