# Introduction

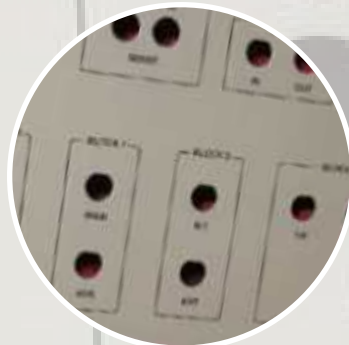

Engraving Services Co was established in 1968 as Number Plate Services Co. The first facility was located next door to the old Motor Registry in the Adelaide Railway Station. In 1973 the business moved to 85 Main North Road Nailsworth and the name was changed to Engraving Services Co. This change heralded the new direction of the company and its desire to provide the highest quality engraving, marking and identification services possible.

Engraving Services Co offers an enormous range of services from simple proto typing to on time multiple line delivery of machined and engraved products and parts. A specialised ability offering your business the advantages of a one stop solution provider. Our staff consists of an experienced Master Engraver and several laser operators. Consistent excellence in workmanship and quick turnaround time are part of our performance underpinning.

Since 1968 Engraving Services Co has set a pattern of exceeding customers expectations, our technical expertise has allowed Engraving Services Co to become one of the most respected engraving firms in South Australia.

Precision Accuracy and Urgency are the hallmarks our customers use to define the interaction with Engraving Services Co.

We know the importance of delivering products as you require on time.

- Masonite
- Matte Board
- Melamine
- Nylon
- Phenolics
- Phosphor Bronze
- Plastics
- Polycarbonate
- Steel
- Stainless Steel
- Timber
- Titanium
- Veneer

## Engraving Services

### Computer Engraving

Traditionally Industrial engraving was the domain of Pantograph engravers, larger manual machines that had pride of place in engraving workshops. These machines are still used throughout the world and are irreplaceable for a number of heavy duty applications. We continue to practice the art of Pantograph engraving for specialist jobs. We also have several computer engraving machines that allow a variety of materials to be engraved. These include: bronze, brass stainless steel, aluminium and plastics.

### Laser Engraving

Lasers have revolutionised the world of Engraving. The breadth of materials that can be marked or engraved as well as contour cut is enormous. The materials we cut, mark or engrave include, but are not exclusive to, the following: plastics, acrylics, timber, paper, cardboard, leather, fabrics, polyester flms, styrene, nylon, melamine, matte board, fbreglass, kevlar, veneer, polycarbonate, masonite, MDF delrin, carbide, marble, glass, cork, stainless steel, brass, titanium and steel. We can mark the following metals (steel, stainless steel, aluminium, anodised aluminium) with a black indelible mark utilising a specialised conductive paste. This mark is resistant to all but the greatest degree of forced mechanical abrasion, including acids, solvents, heat and cold. Technical data is available upon request. The laser is also used for an enormous amount of promotional products. We can laser mark any combination of logos, text and graphics. We can serialize any list or sequence. Including barcodes.

### Cylindrical Engraving

Our Engraving machine can accommodate objects up to 10” or 254 mm diameter. We regularly engrave trophies, cups and a variety of industrial cylinders. Cylindrical engraving allows us to laser mark a huge variety of promotional parts as well as industrial/engineering parts.

### Photo Engraving

Photo Engraving allows a much broader scope of information to be applied to architectural, corporate and commercial signs. A more creative approach to civic and historical identification is all possible on stainless steel or other metals. Anything from sporting themes to historical photographs can be photo lasered.

### Electrical

Electrical tags, face plates, mech switches and associated equipment are easily engraved in our modern facility, we attend to the requirements of single contractors with smaller jobs right through to engraving 100's to 1000's of items for the larger manufacturers.

We specialise in control panels for electrical, electronic, aviation, military, telecommunications, auto and marine uses, the range of products and materials used includes stainless steel, brass, anodized aluminium, powder coated steel, reverse engraved and front engraved plastics.

### Timber Engraving

Timber is perhaps one of the best materials for the laser. Products and services available include: Inlays, overlays, marquetry, puzzle and game manufacturing, awards and plaques, diplomas, sports trophies, bats, doll houses, give aways, picture frames, desk accessories and models. The list is simply endless.

## Other Services

### Promotional marketing

Promotional products are a great way to advertise your business. At ESC we produce and supply a vast array of promotional products. You can choose from items such as pens, desk accessories, fridge magnets, coasters, awards, acrylic and glass, sporting goods, engraved bats, balls, golf clubs, leather accessories, buttons, gifts, tags, card holders, clocks, glassware, decorative items, waiters friends and mugs

### Plaques

Plaques can be made in a number of sizes and finishes. Allow us to produce something that truly says “We are proud of you”
