Australian designed and built

Multiple Alert Methods

Different situations will call for different alert methods. Meeting timers, welfare checks, shake to alert, voice command and the safety button are all methods used to alert the monitoring centre.

Precise Location Tracking and GPS

The WSG safety app ensures your employee's safety by having them confirm their location when setting a timer, or starting a welfare check. If they're entering a multi-floor building they can add extra information e.g. level 5 room 505.

Suitable For All Lone Workers

We monitor varying types of alarms and personal safety devices for a range of industries but particularly those which include Lone Workers. WSG takes on the responsibility of the appointed person in your business who is on call 24/7.

Peace of mind

If you're employees are onsite, work alone or go into potentially risky situations, protect them with the WSG safety app. Feel good knowing your staff have access to the WSG safety app 24/7.

Meeting Timer

Meeting timers are a proactive approach to personal safety and can be discreet. Employees set a timer for their meeting or task, if the timer expires and they don't check-in the monitoring service will begin the process of checking on the welfare of your employees.

Convenient and Easy To Use

An alert is activated by either a PRESS of the 'button' or a SHAKE of the phone. Once an alert is activated GPS tracking allows the monitoring centre to know immediately where to send help.
