

A zero emissions source of immense heat which can **replace fossil fuel within existing power stations** and supply combustion free industrial heat. Meet:

## The Hydrogen Energy Release Optimiser

Star Scientific's HERO® produces unlimited, affordable, safe and reliable heat – with zero emissions. HERO® technology puts hydrogen into use across the world today as the energy and industrial heat choice of the future.

### HOW IT WORKS

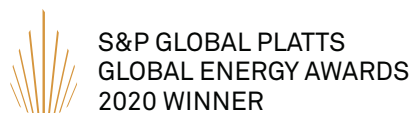

The powerful heat comes from the interaction of hydrogen and oxygen with an advanced catalyst, applied to a metal surface.

HERO® ramps up to more than 700° C in minutes.

The reaction is scalable. The greater the surface area the catalyst covers, the more hydrogen and oxygen, the more heat it produces.

"An extraordinary development...a very, very elegant solution"

**CHIP COMINS**, Founder, Chairman, CEO  
The American Renewable Energy Institute

## BENEFITS

### Safe

A controllable reaction.

### Limitless

Relies on the most abundant element in the world and uses a catalyst that doesn't degrade.

### Clean

Green hydrogen as an input, just pure water as an output. Water can be re-used for hydrogen generation.

### Affordable & Efficient

No pre-heating required. HERO® will accelerate the demand and reduce the cost of green hydrogen production.

### Reliable

Rapid and dependable power generation and heat on-demand that isn't reliant on wind or sun.

## TOP APPLICATIONS

Industrial processes requiring heat

Off grid heating systems

Coal fired generation substitute

Off-grid Power
