A CULTURE OF QUALITY

60 Years of Trampoline manufacturing

The best trampoline for you is one that will last the longest, providing a great, safe bounce for years to come. What better sign of reliability than the longevity of the manufacturer! How many others can boast that trampolines they built 40 years ago are still used today in salty coastal air? We certainly can.

Lionel Duffin made his first trampoline in 1949 under the Steelfast brand and in 2007 Mr Trampoline and Steelfast joined together. Over time we have developed new trampoline frames to suit a variety of installation types, but our core 2-string performance beds have withstood the test of time and are still made by hand in Melbourne today.

Confidence in a perfect bounce

We use the best materials and manufacture to the highest standards to make the longest lasting trampolines on the market. We guarantee the quality of all our trampolines whether they are free-standing or installed in-ground.

INSTALLING IN-GROUND TRAMPOLINES

As the pioneers and manufacturers of dedicated in-ground trampolines, we have a wealth of technical and construction resources available to assist a wide range of installation types. Search our website under 'resources' / 'manuals and guides', for downloadable installation instructions or call one of our friendly staff and we will help with all your installation questions – we may be able to put you in touch with a dedicated installer depending on where you live. Often new trampoline owners will put their builders or landscapers in touch with us, call us today, we'll be glad to help.

IN GROUND TRAMPOLINES

At Mr Trampoline we genuinely believe installing your trampoline in-ground provides the safest option in trampolining. In-ground they are easiest for everyone to enjoy a quick bounce, become energised and be happy. As our Olympic standard trampolines do not need a safety net, they blend into the scenery allowing for the most attractive gardens. They also make it easy for everyone to learn safe bouncing techniques. In-deck options are also available for timber or concrete structures.

Our trampolines are hand made in Australia to Olympic competition standards and are strong, durable and suitable for all levels of skill.

ABOVE GROUND TRAMPOLINES

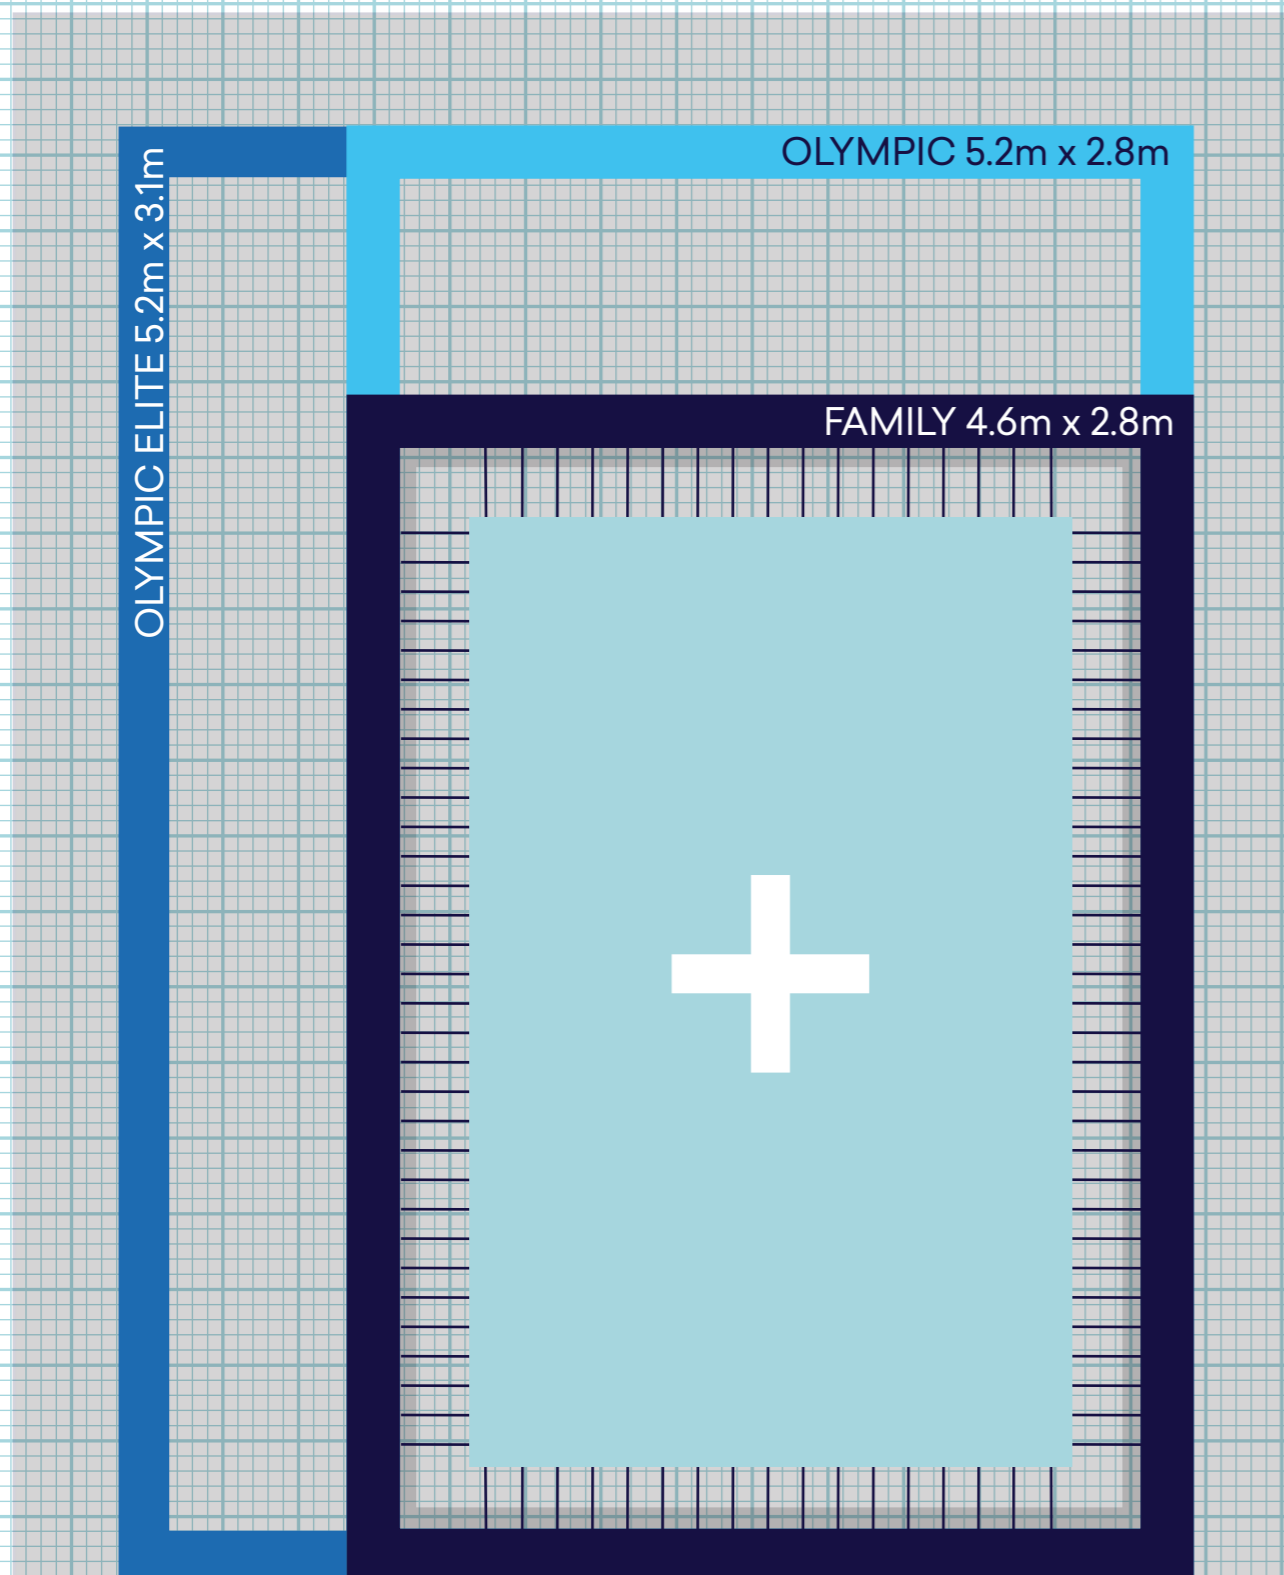

The above ground trampolines are free standing and therefore moveable to different positions in your property.

NOTE: with some minor modification these trampolines can transform to in-ground trampolines.

Built with superior quality materials we expect our trampolines to last 25 years plus.

We offer Australia-wide delivery and may offer assembly assistance as a service within or around Melbourne. Call us today to ask how we can send your new Mr Trampoline.

Our range is designed to suit a variety of backyard sizes.

TRAMPOLINE SIZES & PRICES

We have three sizes in our standard range - all Australian hand-made and of the highest quality available. When selecting a size, one must consider available space and your ambitions. You should also consider the size of your family and the number of likely users.

	DECK	IN-GROUND	ABOVE GROUND
FAMILY 4.6m x 2.8m <small>FRAME SIZE</small>	\$7,365	\$8,070	\$9,955
OLYMPIC 5.2m x 2.8m <small>FRAME SIZE</small>	\$7,970	\$8,675	\$10,535
OLYMPIC ELITE 5.2m x 3.1m <small>FRAME SIZE</small>	\$8,485	\$9,500	\$11,080

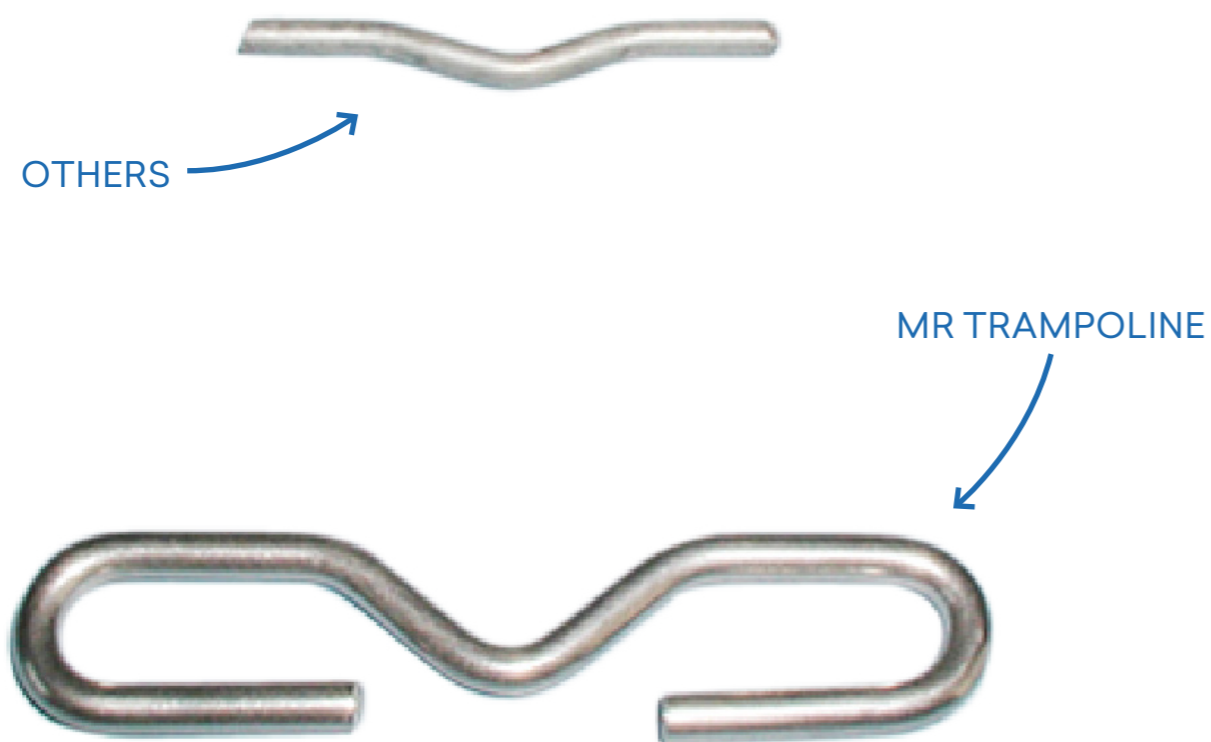

PRICES INCLUDE PADDING FOR ABOVE GROUND MODELS AND RUBBER SURROUNDINGS FOR IN-GROUND AND DECK MODELS. ALL PRICES INCLUDE GST.

Our trampolines can be configured for deck installation (over masonry or timber), in-ground with purpose-built pit, or, above-ground / free standing. Search our website under 'resources' / 'manuals and guides', for downloadable instructions or call one of our friendly staff for help.

HAND WOVEN FOR STRENGTH

Our world-class two-string performance trampoline beds are hand woven and coated with all-weather UV stable rubber-based paint to provide a long and happy life.

Combined with performance springs, the open weave of the string bed is engineered to allow rapid air movement through the bed for the user to achieve the fastest, strongest and smoothest bounce of any trampoline on the market.

SMALL PART PLAYS BIG ROLE

Clips are used to connect the woven mat to the frame via a spring. These enable a single spring to spread over a large number of individual strands of the mat and to spread the load. This way a longer spring can stretch to the greatest length without damaging the ends of the mats.

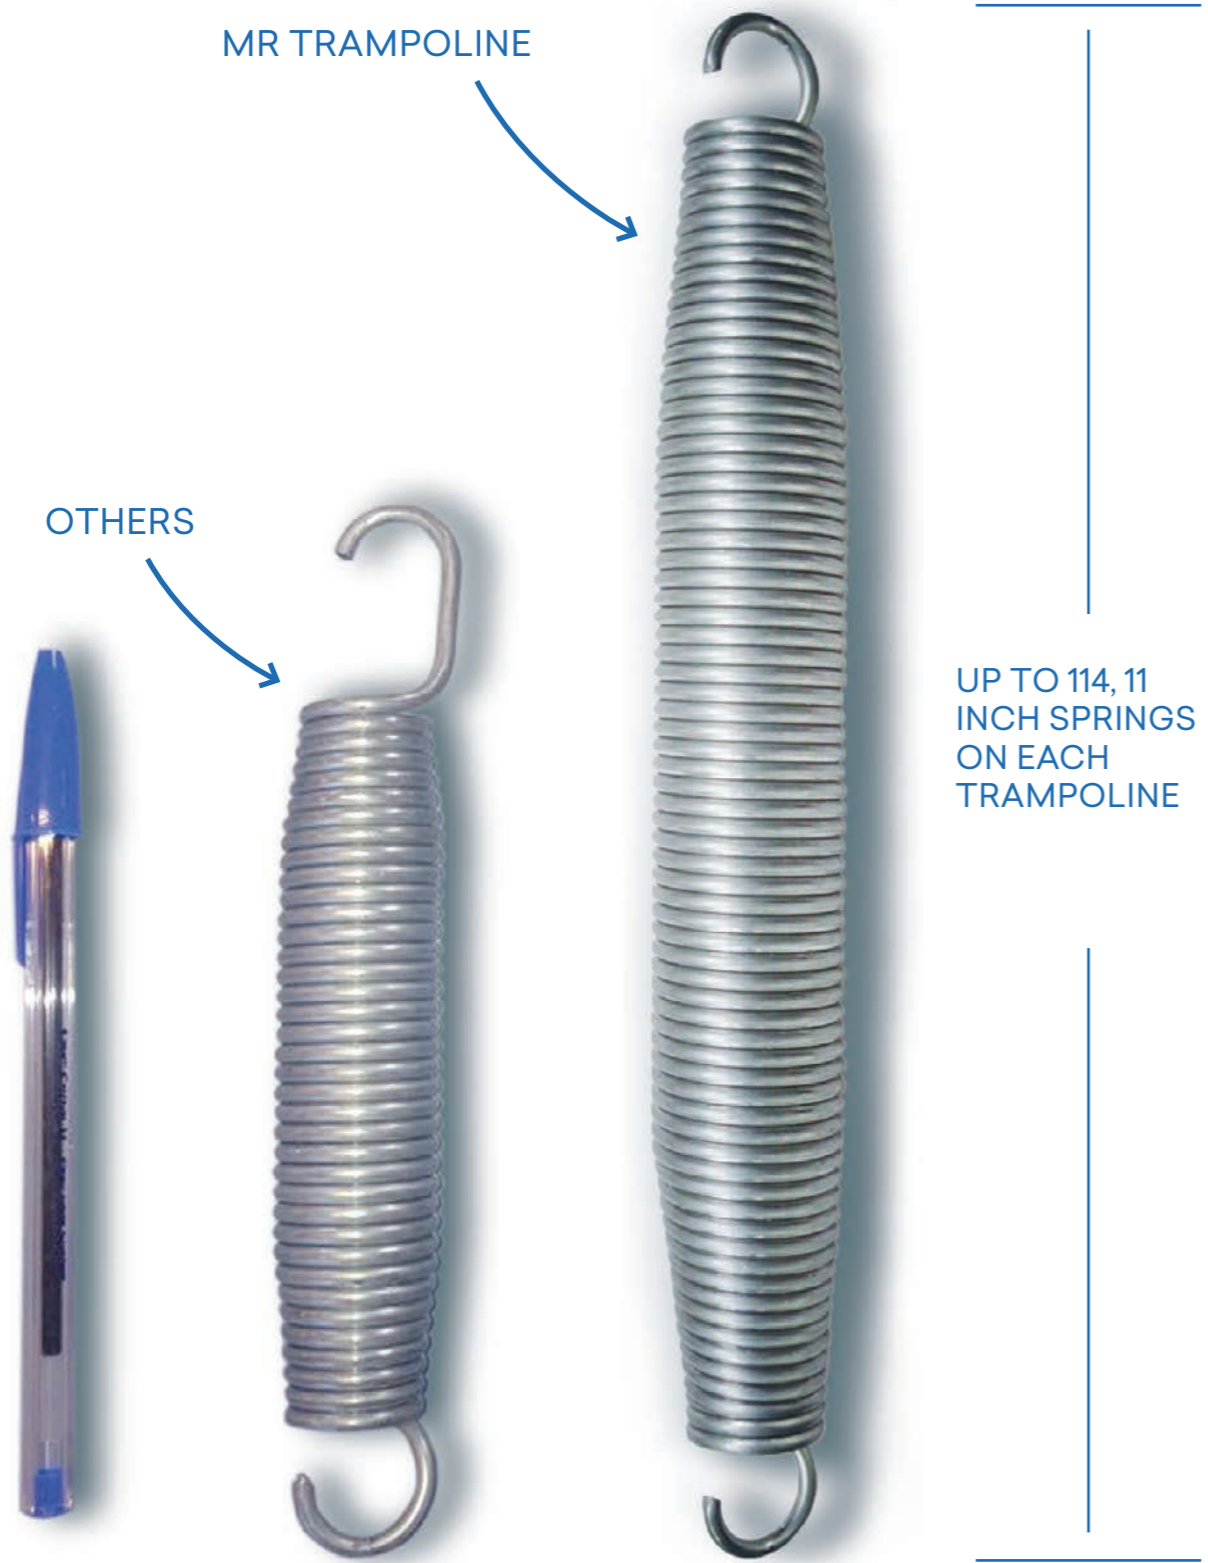

Our large clips are designed to distribute the weight evenly and the curled ends prevent the clips from falling out. They are engineered to be strong, reliable and long lasting.

Building a great bounce into a trampoline is a combination of the strongest frame, the best performance springs, the sturdiest mat and don't forget the clips! We use only the best materials to make the best trampolines on the market.

WE BUILD REAL TRAMPOLINES

Mr Trampoline uses huge 11 inch springs, about 100 of them on every trampoline. This generates the soft deep bounce required for performance trampolines.

Kids love this performance bounce, it allows them to develop awesome skills and the challenge of trampolining continues beyond the teenage years.

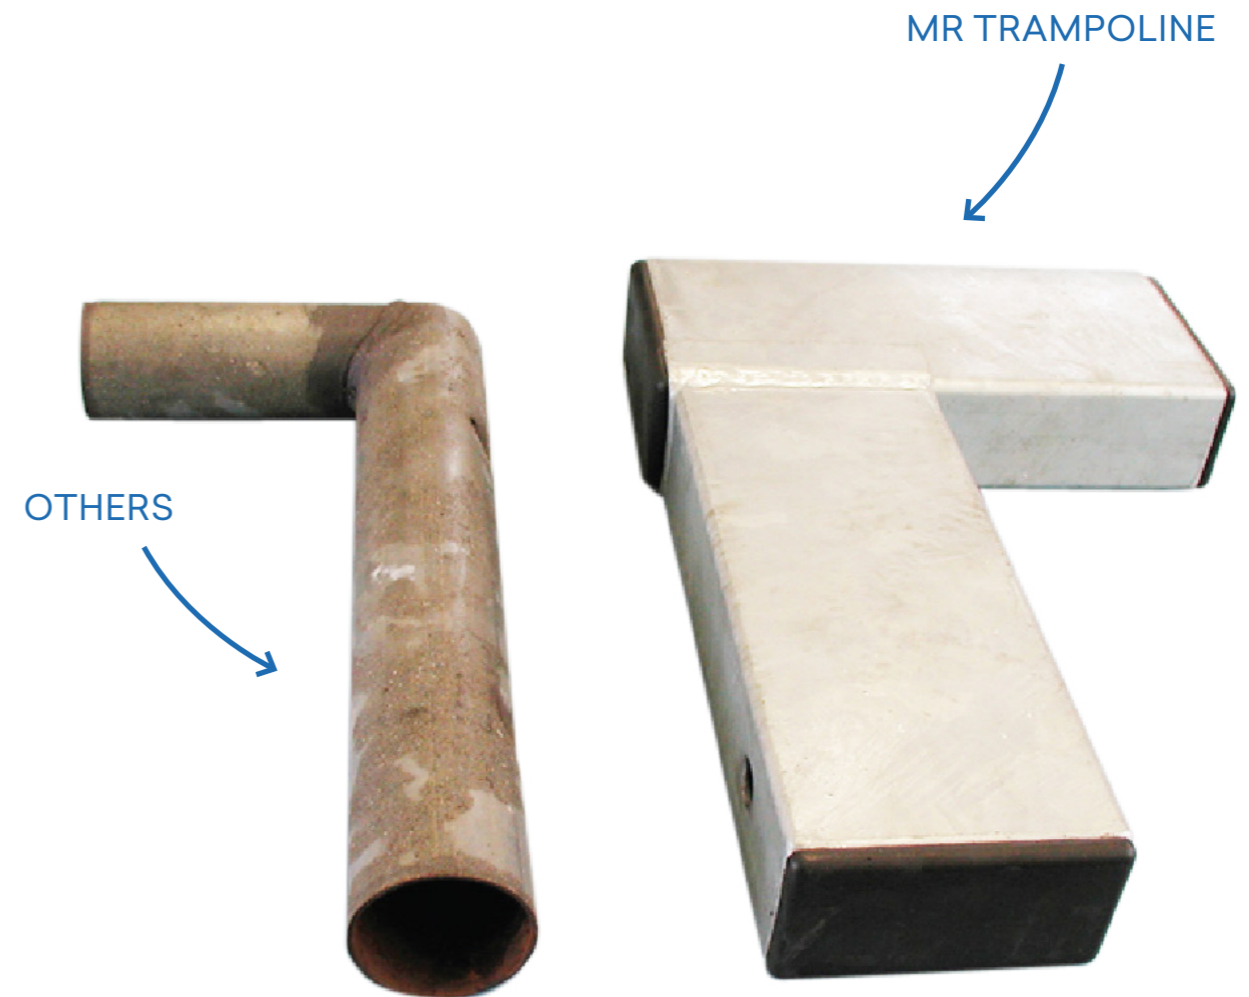

HIGHEST QUALITY BUILD

Our trampolines are designed for permanent outdoor installations. They are engineered and built to live to a ripe old age, even in the salty air of coastal homes.

All of our frames are fabricated in Australia from Australian made products and hot-dip galvanised heavy duty from rectangular hollow section steel.

Whether in-ground or above-ground, the frames will last for the next generation to enjoy.

BUILT FOR HARSH AUSTRALIAN CONDITIONS

Designed and built in Australia to withstand the great outdoors and all types of weather has made the Mr Trampoline products world-famous. Our two-string performance beds are in demand by recreational and commercial users world-wide. Our Australian climate puts any outdoor products to the greatest test, and we use the best materials available to achieve the longest lifetime of any trampoline.

As a rule, our trampolines are low-maintenance, however we do recommend you inspect your trampoline on a regular basis. Always check your springs, conditions of the safety pads and make sure all string loops are connected to the clips.

Our mats can be rotated, flipped and re-painted to provide for an extra-long life. Call us today and we can provide paint, repair and rejuvenation kits to extend the life of your equipment for years to come.

We've been manufacturing trampolines in Australia since 1949. We're proud to support local jobs and the community.
