

OUR STORY

Barrierboard™ was the brainchild of a brilliant and innovative entrepreneur and acoustics engineer. A proud Australian named Nerio Castelli, who in the late 90's combined locally sourced elements to form a cost effective panel that not only blocks noise transfer from escaping or entering a targeted room, home, office, boardroom or any workplace where discretion is of serious importance. Barrierboard™ also fits in these environments without ever being visually noticed after installation.

Barrierboard™ was so ground-breakingly successful in noise reduction that it even received the prestigious 2003 Australian Innovative Products Award. An award that stands proudly in our office.

In recent times, Barrierboard™ Australia Pty Ltd, a company owned and operated by Nillumbik locals who have combined their years of experience in construction, civil engineering and administration have acquired Barrierboard™ and hence are the sole manufacturer and distributor.

This gives Barrierboard™ Australia an enviable range to both sound blocking and sound reverberation absorption that we not only supply, but install as well. Maintaining a close relationship with Acoustic sound specialists and accredited qualified tradespeople.

**Block, Absorb and
Reduce Noise
up to 90%**
