Benefits of choosing SafetyLink:

SafetyLink's Rope Guide Gutter Protector will ensure your ropes do not get damaged when abseiling over a sharp edge or guttering systems. Conversely the bracket will ensure no damage is done to the gutter when in use, expertly guiding the rope exactly where you want them.

The bracket is easy to install and complements any buildings' facade. It can also be removed with ease after use, making it a very versatile product. The Bracket has two collared eyebolts attached, these are not to be used as load rated anchors in any situation. The collared eyebolts are present to ensure that the abseil ropes will stay in their desired location and do not slip from the bracket. It is recommended that a strap be used between the collared eyebolts to secure the abseil ropes so they cannot unintentionally leave the Bracket.

SafetyLink will provide you with the following:

- ❑ All products tested and manufactured to Australian and New Zealand Standards.
- ❑ All distributors and installers are trained to use SafetyLink products.
- ❑ Supply installation guides, testing results and product sheets.
- ❑ Layout Design Service providing compliant roof safety systems.
- ❑ Supply a large range of roof anchors that protect you from the ground up, allowing complete access to your roof.
- ❑ Installers are qualified to do yearly inspections on your anchors as per Australian and New Zealand Standards.
