

# COLLAR & RUFF

## LEATHER & CARE GUIDE

---

### About

Only top quality saddlery leathers, such as latigo and bridle, are used in Collar & Ruff products. Collars and leads are conditioned before being packed and posted.

### Care Guide

When you dog's gear becomes dirty or grimey, wipe the items down with a damp rag and stand in shape to dry naturally. If the leather feels dry, use a little leather conditioner, gently rubbed in with a clean cotton rag.

### Important

Lighter coloured leathers will darken with age, how quickly is largely due to usage. Not allowing your dog to swim or play in mud in these collars is recommended but an occasional dip with a wipe down afterwards should be fine. Exposure to chlorinated and salt water is not advised. Hardware can dull depending on the collar usage. A little metal polish brings back the shine and removes faint scratches. Any damage done to the leather whilst it is wet will be greater than if it were dry.
