DESIGNED TO ACCURATELY SPREAD DRY FREE RUNNING FERTILISERS

CRUMP SPREADERS

Crump spreaders are primarily designed to accurately spread dry free running fertilisers up to 1500 Lts/Ha. Other uses such as higher or lower outputs may require an attachment. Basic machines spread products such as: Granulated super, urea, potash and nitrogen, ground rock fertilisers and free running lime, course seeds and pelletised fertiliser. They can also be used to spread bran or grain baits for vermin control.

DELUXE MODEL

Has the added feature of twin outlets which can be adjusted to compensate for distribution variation, (almost zero for granulated fertilisers). Recommended model for agitators and quantity booster with galvanised safety screen.

SAFETY REQUIREMENT

The galvanised safety screen is required when fitting agitators or lump breakers

OPTIONAL EQUIPMENT EFFECTIVE COVERAGE

- Quantity booster - fine limes and granulated pellets.
- Mk 6 Agitator - lower application rates (ie 300+Kg/Ha) of gritty fertilisers.
- Mk 7 Agitator - higher application rates (ie T/Ha) of very fine or light fertilisers.
- Lump breaker
- Seed spout
- Live stock feed chute
- Galvanised safety screen
- Internal gates
- Rubber mats
- Swivel pull
- Optional galvanised frame
- Hopper Cover
- CUSTOM BUILT MACHINES

With PTO speed of 540 rpm approximate coverage can be achieved.

1. 27.5m /90ft - Uniform sample of double super
2. 24.5m /80ft - Superphosphate (Single Super)
3. 20m /65ft - Uniform graded Urea
