

AA Steel Works

Established in 2014, AA Steel Works predominately design and manufacture a complete range of commercial and domestic screw pier solutions to suit any project. Operating from the Gold Coast and Victoria.

The management team have over 40 years experience and knowledge in the screw pier industry, along with working relationships with engineers and builders throughout Australia and New Zealand. All of AA Steel Works installers are highly trained so the process is efficient and professional.

Products & Services

- Screw Piers
- Extensions
- Ground Anchors
- Top Plates
- Dust Covers
- Light Pole Anchors
- Connectors
- Custom Steel Fabrication Projects

Screw Piers

What are they?

Screw piers are effectively a big screw that is drilled into the ground. There is no time spent excavating a huge hole to box and pour concrete, no soil to remove from site and no over compensating over how deep the piers need to be. Each individual pier is installed down to the required loading. Screw piers have been around for many years and we see them as an efficient solution for many residential projects. They can be used to replace standard house and shed piles, anchor back retaining walls, support decks, correct slumping foundations and as footings to furniture such as light poles- the list is endless.

Key Benefits

- Minimal excavation
- Minimal Concrete (if any)
- No restrictions on depth in a majority of soils
- The depth of each Screw Pier is based on the PSI at that specific location
- Great uplift performance
- Fast!
